

I Missed That

Transcription tells you what was said.
We tell you what you missed.

For hard-of-hearing and late-deafened adults, at their hearing family's table.

Team: [Name] · [Name] · [Name] · [Name]

Every accessibility tool puts the whole burden on the deaf person.

Read faster. Ask again. Get told never mind. **We built the other side.**

“Dinner table syndrome and I want to cry.”

— thread title, r/deaf, 174↑⁷

“DTS - Dinner Table Syndrome. Deaf people in hearing families are too familiar with this, myself included. It's simply too much work to follow along. That's why you feel like you could sleep for a week, we have to work much harder than a hearing person to understand verbal conversations.”

— r/deaf, “Exhausted and sad after family Sunday lunch,” 36↑⁷

“I'd say the hardest part for me as a Deaf person in a hearing family during the holidays is extreme dinner table syndrome.”

— r/deaf, “Christmas family diner experiences”⁷

THE NUMBERS

50M

people in the EU say they have trouble hearing. One in nine.¹

And the place they most want to hear isn't the office. It's the family table.

~1/3

of them use hearing aids¹

56%

say the family table matters most. Work: 21%.²

51.9%

of DHH live-caption users are frustrated with them³

170 wpm

caption comprehension drops. Group talk runs 160–220.³

4%

of videos caption non-speech sound: laughter, tone⁴

>90%

of deaf children have hearing parents⁵

Sources on the last slide. ¹ EU27 figure derived from the 59M Europe (EU+UK+NO+CH) total. ⁵ US data, children.

THE CONTRACT

A table is a contract. We hold both sides to it.

THE TABLE'S SIDE

Phones as mics

QR join, no install. Each voice arrives named.

Crosstalk lamp

Glowes amber when two people talk at once.

One at a time

A gentle nudge when the talk keeps flapping.

YOUR SIDE

Plans, with why

Sunday at nonna's: who brings what, and why.

Why they laughed

The joke itself, so you can laugh for real.

Say it as text

One tap, shown on every phone at the table.

Asked you

The moment someone asks you, with a buzz.

Look-away catch-up

Look back up and the card opens itself.

Doubt words

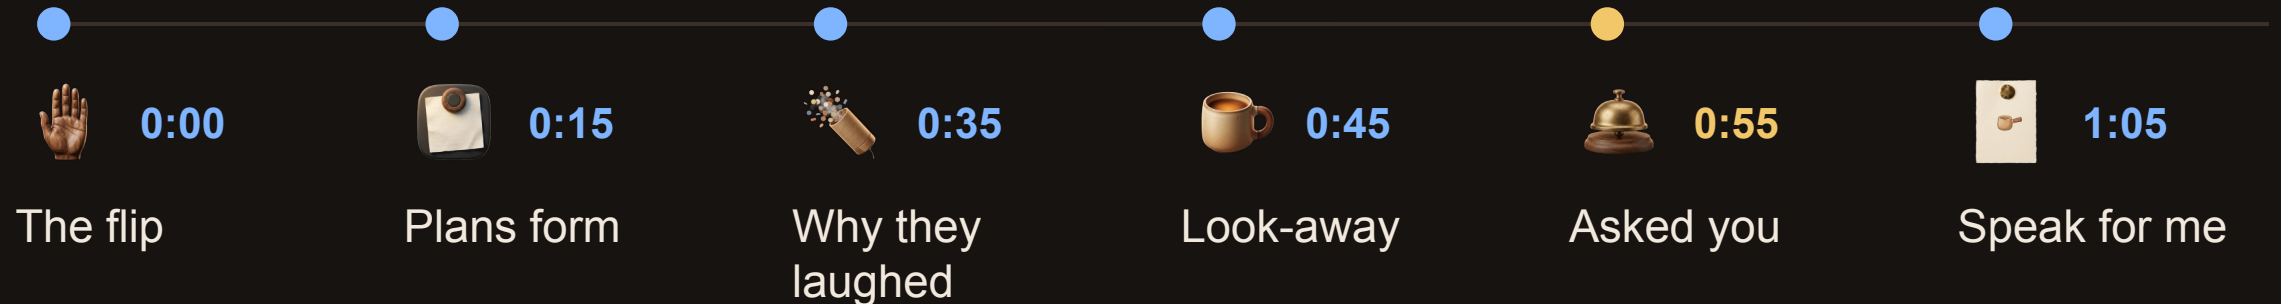

Unsure words dimmed. Tap to ask again.

A family Sunday lunch. Three phones, one clerk.

Not a transcript. The plan, the joke, the question aimed at you, and a way back in.

Backup: ?replay=demo2 replays the same cards, no mic needed.

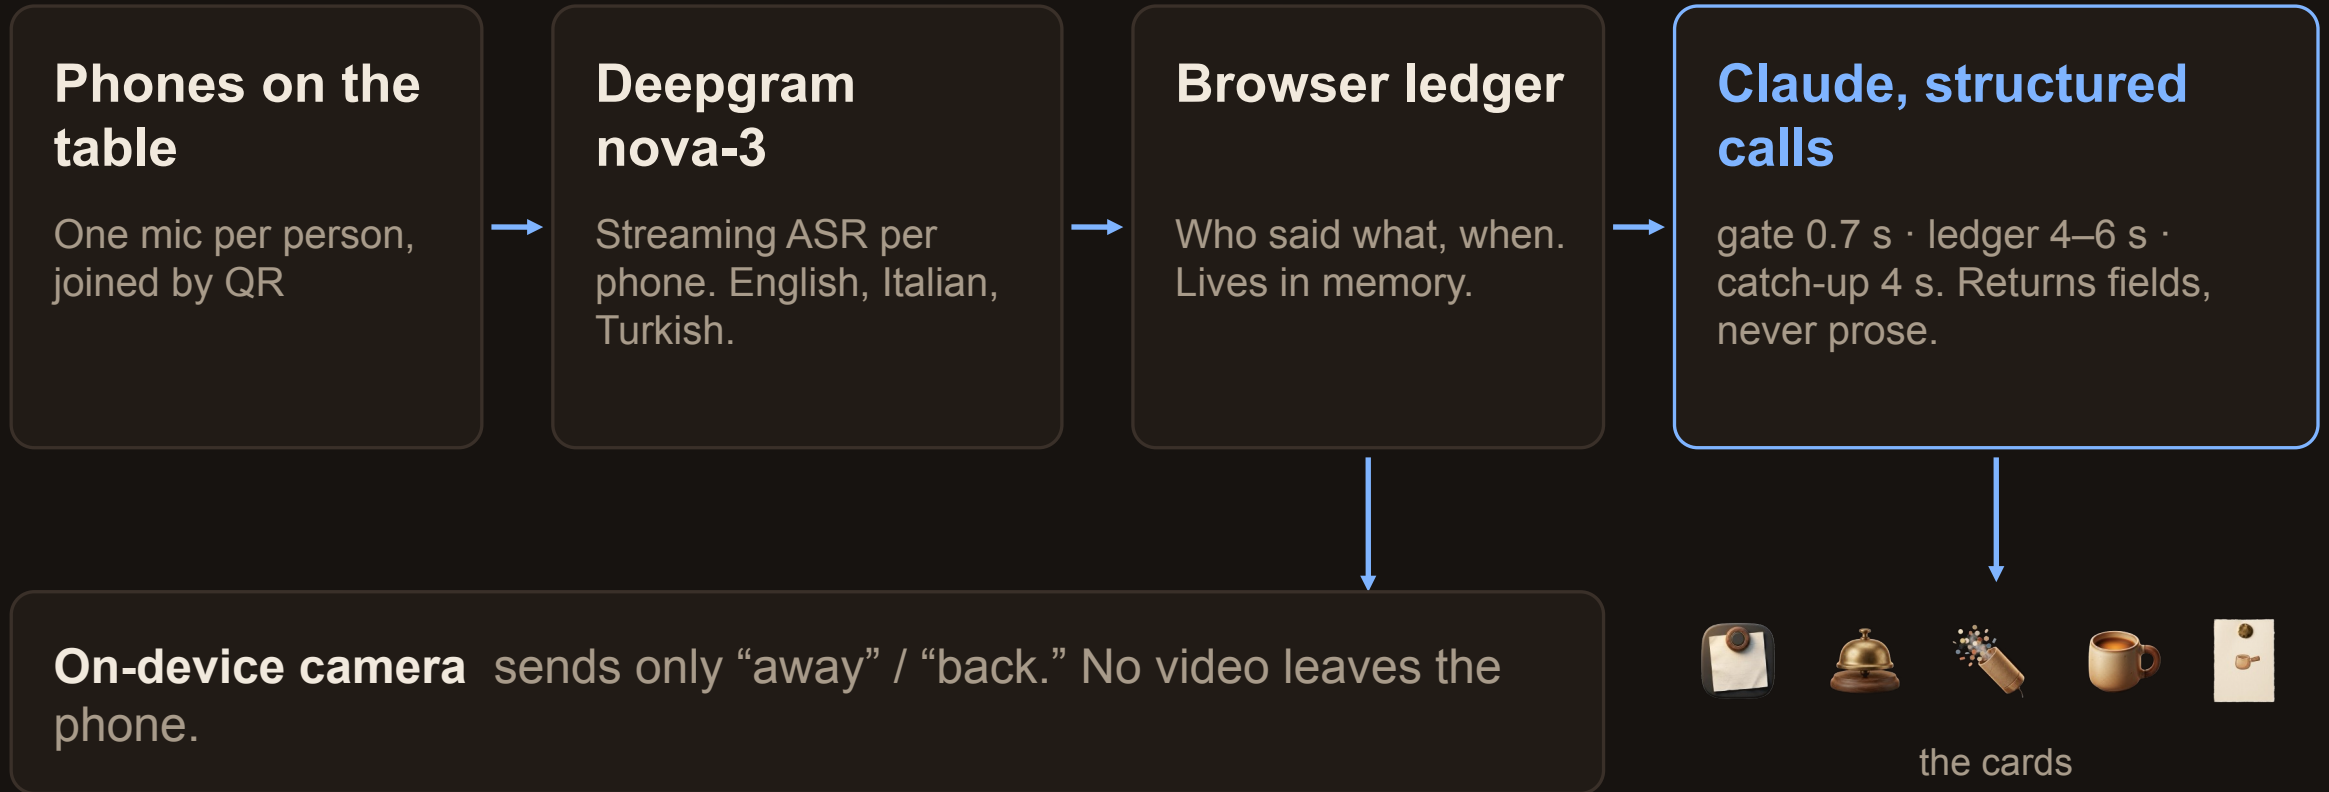

Ava does the mics. We do what the mics are for.

TOOL	ALREADY DOES	DOESN'T DO
Ava	Phones join as named mics, speaker colours, type-to-speak	No plans, no “asked you,” no “why they laughed.”
Otter / Teams “Catch me up”	A summary after the fact, or on demand	Built for a meeting room, not a dinner table
MS Teams captions	Live captions, logged-in speaker names	Breaks on overlap. Nothing addressed to you.
Caption glasses (XRAI, Captify, AirCaps)	Captions in your line of sight	Arms clash with hearing aids. Still just words.
I Missed That	Phones as mics, like Ava	Plans with why · asked you · why they laughed · look-away catch-up · say it as text

HOW IT WORKS

From the table to a card, in seconds.

Nothing stored. In memory only, gone when the session closes.

SCOPE, LIMITS, NEXT

What this is, and isn't.

BUILT FOR	hard-of-hearing and late-deafened adults at a hearing family's table.
NOT FOR	sign-first Deaf users.
TESTED	not yet with a hard-of-hearing user.
REACH	~10M in the EU could use it. Tonight it reaches tens.
NEXT	HoH user tests, a table mode for 65+, glasses as a display.
