

One at a time.

The first accessibility tool for the hearing side of the table.

Team: [Name] · [Name] · [Name] · [Name]

Every accessibility tool puts the burden on the deaf person.

Read faster. Ask again. Get told never mind. **We built the other side.**

"I've started just nodding along even when I have no idea what was decided. My boss mentioned something about a new client project last Thursday and I smiled and agreed but I genuinely don't know what I signed up for."

— r/deaf, 35↑

"DTS - Dinner Table Syndrome. Deaf people in hearing families are too familiar with this, myself included. It's simply too much work to follow along. That's why you feel like you could sleep for a week, we have to work much harder than a hearing person to understand verbal conversations."

— r/deaf, 36↑

THE NUMBERS

50M

people in the EU say they have trouble hearing. About one in nine.¹

56% vs 21%

say the family table matters most for hearing well. Work: 21%.²

170 wpm

caption comprehension drops. Group speech runs 160–220.³

4%

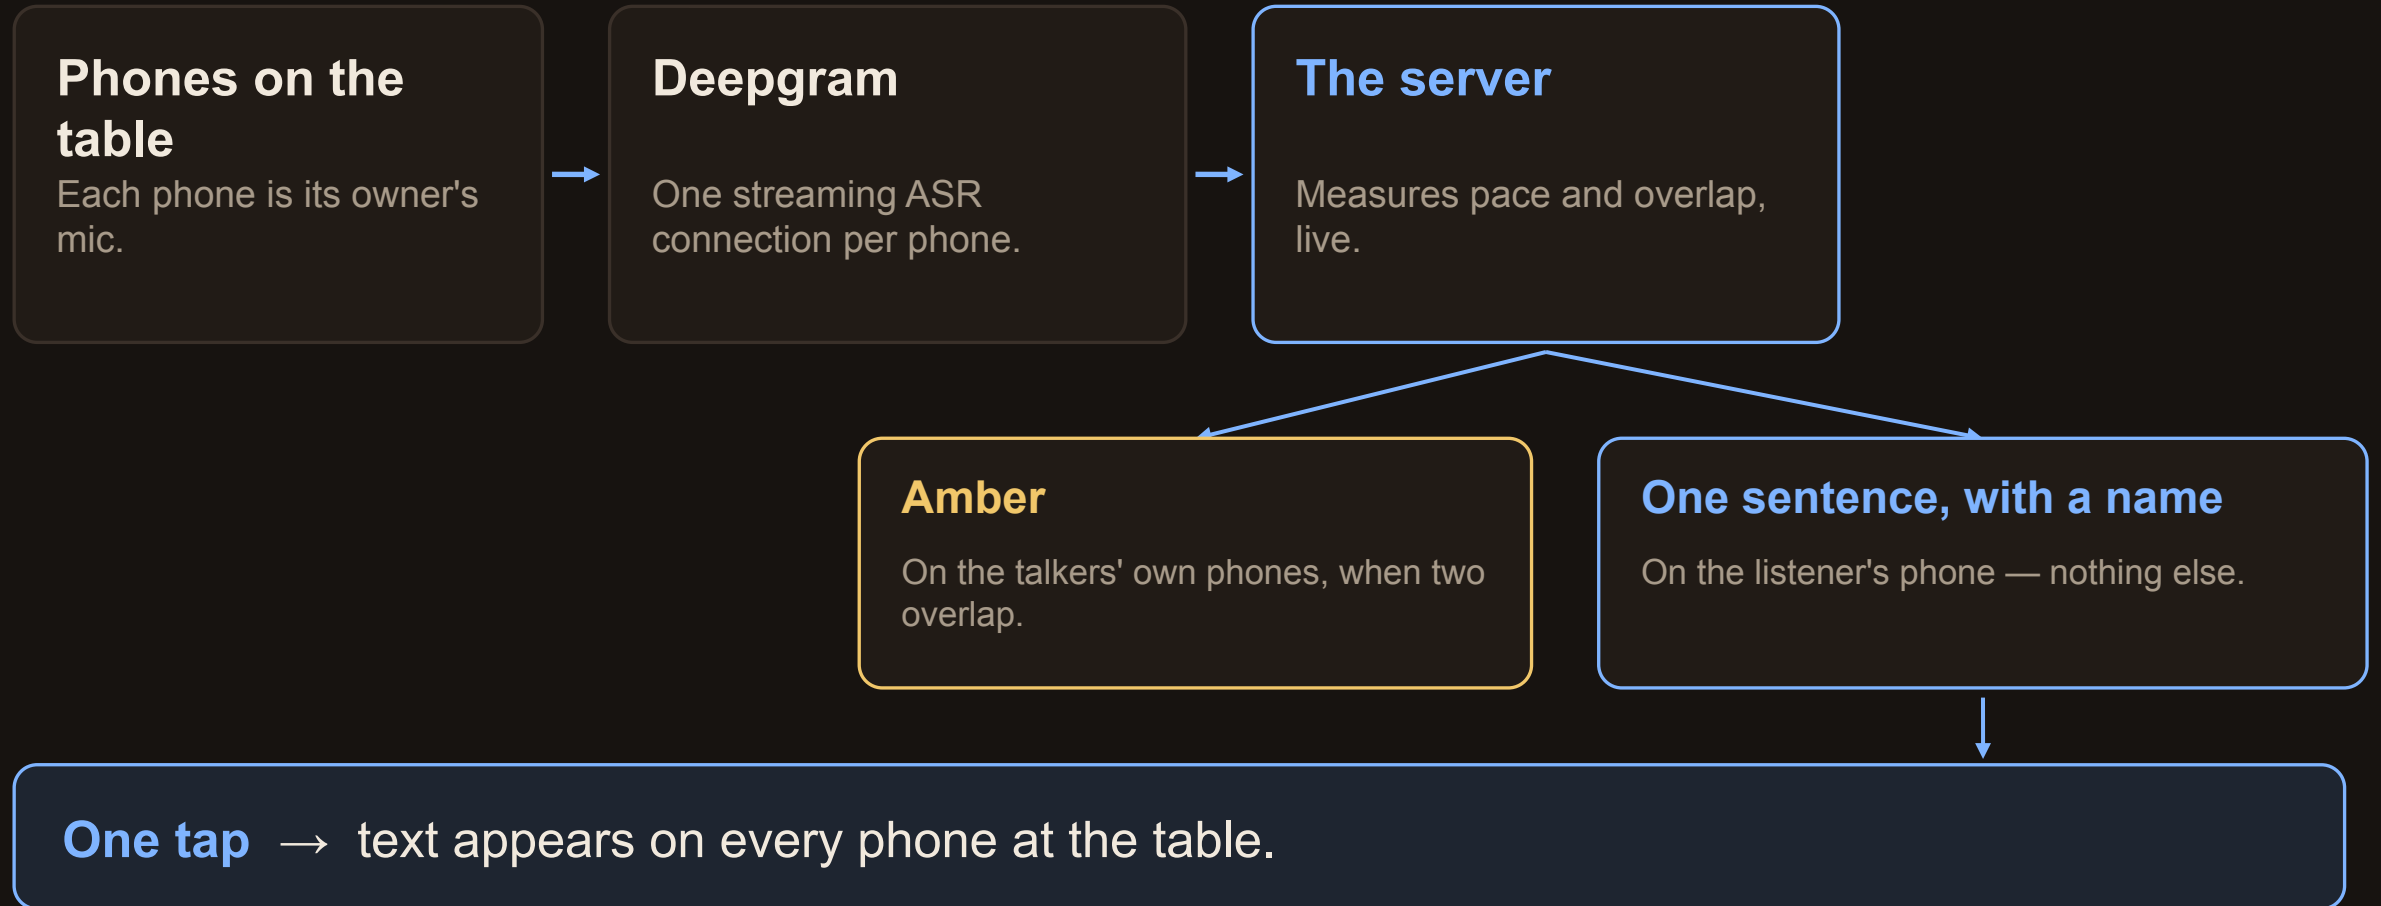

of non-speech sound (laughter, tone) ever reaches a caption³

Hard-of-hearing and late-deafened adults.

Sources on the last slide. ¹ EU27 figure derived from the 59M Europe (EU+UK+NO+CH) total. ² EuroTrak Italy 2022. ³ from research synthesis.

HOW IT WORKS

One diagram.

Sentence under 1 second. Lamp under 2 seconds. Nothing is stored.

WHAT'S NEW

Ava does the mics. We do the other side of the table.

TOOL	ALREADY DOES	DOESN'T DO
Ava	Phones join as named mics for captions	Never sends pace or overlap back to the speakers' own phones.
Otter / Zoom	Summarizes the conversation	Only after it's over — no live signal to anyone at the table.
Caption glasses	Captions in the deaf person's line of sight	Still just words for one person. Nothing the table can act on.
One at a time	Phones as mics, like Ava	Amber on the talkers' phones. One sentence, one tap, on every phone.

SCOPE, LIMITS, NEXT

What this is, and isn't.

BUILT FOR hard-of-hearing and late-deafened adults, in hearing rooms.

NOT FOR sign-first Deaf users.

TESTED not yet with a hard-of-hearing user.

REACH ~10M in the EU could use it. Tonight it reaches a table.

NEXT HoH user tests. The plans ledger and look-away catch-up are already built as the second layer — ask to see them. Italian and Turkish verified.
